#### Course information

##### Course prerequisites

The MBF research seminar is primarily designed for MBF students who have already finished their compulsory coursework. The content of these compulsory courses are considered as prerequisites. For this seminar, a basic knowledge of econometrics is helpful.

##### Course content

The objective of the MBF research seminar is to give students the opportunity to learn how to conduct independent and original research on a current topic of academic interest, present the results, and receive feedback. The research seminar in financial economics focuses on the elaboration of current issues:

- The impacts of unconventional monetary policies on financial markets such as money markets and foreign exchange (FX), and bond markets.
- How new regulations affect financial markets such as Repurchase Agreements (repo) and derivatives markets.
- How MIFID II will affect Algorithmic and High Frequency Trading?
- The information content of FX volume and order flow.
- Machine learning techniques applied to topics in finance such as money markets, financial stability, asset pricing, and market microstructure.
- The microstructure of cryptocurrency.

We will propose the above-mentioned topics, but welcome suggestions from students, too. The individual topic may also have a connection to the student's master's thesis. During the block seminar participants will be asked to present the main findings of their paper and take the role of a discussant for another paper. The discussant is assigned by the instructor after receipt of the paper. In addition, participation in the general discussion is expected.
