10,382,1.00 (GSERM) Econometrics of Big Data -- Englisch -- Spindler Martin

Course information

Course prerequisites
The course is a PhD level course. Basic knowledge of parametric statistical models and associated asymptotic theory is expected.

Learning objectives
Students will be introduced to several modern methods, largely coming from statistics and machine learning, which are useful for exploring high dimensional data and for building prediction models in high dimensional settings. Students will learn how to adapt high dimensional methods to the problem of doing valid inference about model parameters and illustrate applications of these proposals for doing inference about economically interesting parameters.

Course content
As in many other fields, economists are increasingly making use of high-dimensional models - models with many unknown parameters that need to be inferred from the data. Such models arise naturally in modern data sets that include rich information for each unit of observation (a type of "big data") and in nonparametric applications where researchers wish to learn, rather than impose, functional forms. High-dimensional models provide a vehicle for modeling and analyzing complex phenomena and for incorporating rich sources of confounding information into economic models.

Our goal in this course is two-fold. First, we wish to provide an overview and introduction to several modern methods, largely coming from statistics and machine learning, which are useful for exploring high-dimensional data and for building prediction models in high-dimensional settings. Second, we will present recent proposals that adapt high-dimensional methods to the problem of doing valid inference about model parameters and illustrate applications of these proposals for doing inference about economically interesting parameters.

Course structure
Lecture 1: Introduction to High-Dimensional Modeling

- Hastie, T., R. Tibshirani, and J. Friedman (2009), The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Springer. [Elements from Chapters 2, 5, 7, 8, 10]
- James, G., D. Witten, T. Hastie, and R. Tibshirani (2014), An Introduction to Statistical Learning with Applications in R, Springer. [Elements from Chapters 2, 3, 5, 7, 8.2]
from Chapters 2, 14]

Lecture 2: Introduction to Distributed Computing for Very Large Data Sets

Lecture 3: Tree-based Methods

- Hastie, T., R. Tibshirani, and J. Friedman (2009), The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Springer. [Chapters 9, 10, 15, 16]
- James, G., D. Witten, T. Hastie, and R. Tibshirani (2014), An Introduction to Statistical Learning with Applications in R, Springer. [Chapter 8]

Lecture 4: An Overview of High-Dimensional Inference

Lecture 5: Penalized Estimation Methods

- Hastie, T., R. Tibshirani, and J. Friedman (2009), The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Springer. [Chapters 3, 4, 5, 18]
- James, G., D. Witten, T. Hastie, and R. Tibshirani (2014), An Introduction to Statistical Learning with Applications in R, Springer. [Chapter 6]

Lecture 6: Moderate p Asymptotics

Lecture 7: Examples

- Belloni, A., V. Chernozhukov, and C. Hansen (2015), "Inference in High Dimensional Panel Models with an Application to...

Lecture 8: Inference: Computation

Lecture 9: Introduction to Unsupervised Learning

- Hastie, T., R. Tibshirani, and J. Friedman (2009), The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Springer. [Chapter 14]
- James, G., D. Witten, T. Hastie, and R. Tibshirani (2014), An Introduction to Statistical Learning with Applications in R, Springer. [Chapter 10]

Lecture 10: Very Large p Asymptotics

Course literature
Course notes and a list of readings provided at the beginning of the course.

Additional course information
Only for PhD students of the University of St.Gallen

PEF students may register via regular bidding for the courses offered together by PEF and Global School in Empirical Research Methods (GSERM). Enrolment in a course is binding; students have to attend the course and take the exam. The credits will be shown on the scorecard.

All other PhD students should register for the courses offered by Global School in Empirical Research Methods (GSERM), both via bidding and via GSERM for:

- courses for the curriculum and
- optional courses with an examination. These will be listed on the scorecard under optional work (only possible if all required elective courses have already been completed).

Please register only via GSERM for:

- optional courses without an examination and
- optional courses if not all required elective courses have been completed (not shown on the scorecard).

In the case of the President’s Board having to implement new directives due to the SARS-CoV-2 pandemic in SpS2021, the course information listed above will be changed as follows:

- This course may take place in a digital version.

There will be no change in the examination.

Examination information

Examination sub part/s

1. Examination sub part (1/1)
Examination time and form
Decentral - examination paper written at home (individual) (100%)
Examination time: term time

Remark
take-home final exam

Examination-aid rule
Term papers

Term papers must be written without anyone else’s help and in accordance with the known quotation standards, and they must contain a declaration of authorship which is a published template in StudentWeb.
The documentation of sources (quotations, bibliography) has to be done throughout and consistently in accordance with the chosen citation standard such as APA or MLA.

For papers in law, the legal standard is recommended (by way of example, cf. FORSTMOSER, P., OGOREK R. et SCHINDLER B., Juristisches Arbeiten: Eine Anleitung für Studierende, newest edition respectively, or according to the recommendations of the Law School).

The indications of the sources of information taken over verbatim or in paraphrase (quotations) must be integrated into texts in accordance with the precepts of the applicable quotation standard, while informative and bibliographical notes must be added as footnotes (recommendations and standards can be found, for example, in METZGER, C., Lern- und Arbeitsstrategien, newest edition respectively.

For any work written at the HSG, the indication of the page numbers is mandatory independent of the chosen citation standard. Where there are no page numbers in sources, precise references must be provided in a different way: titles of chapters or sections, section numbers, acts, scenes, verses, etc.

Supplementary aids

Examination content

Content of the lectures

Examination relevant literature

To be discussed in class

Please note

Please note that only this fact sheet and the examination schedule published at the time of bidding are is binding and takes precedence over other information, such as information on StudyNet (Canvas), on lecturers’ websites and information in lectures etc.

Any references and links to third-party content within the fact sheet are only of a supplementary, informative nature and lie outside the area of responsibility of the University of St.Gallen.

Documents and materials are only relevant for central examinations if they are available by the end of the lecture period (CW21) at the latest. In the case of centrally organised mid-term examinations, the documents and materials up to CW 12 are relevant for testing.

Binding nature of the fact sheets:

- Course information as well as examination date (organised centrally/decentrally) and form of examination: from bidding start in CW 04 (Thursday, 28 January 2021);
- Examination information (regulations on aids, examination contents, examination literature) for decentralised examinations: in CW 12 (Monday, 22 March 2021);
- Examination information (regulations on aids, examination contents, examination literature) for centrally organised mid-term examinations: in CW 12 (Monday, 22 March 2021);
- Examination information (regulations on aids, examination contents, examination literature) for centrally organised examinations: two weeks before the end of the registration period in CW 14 (Thursday, 8 April 2021).
